ContainerFumigation.ca are specialists in fumigation and treatment against BMSB leaving Canada to overseas destinations including Australia and New Zealand.

Due to the increasing threat from the Brown Marmorated Stink Bug (BMSB) countries like Australia and New Zealand are requiring incoming cargo to be treated for this pest.

The Brown Marmorated Stink Bug is an agricultural pest native to China, Japan, Korea, and Taiwan but is now being found in North America and in parts of Europe. The bug itself is extremely harmful to crops, fruits and ornamental trees and continues to spread throughout the world.

Treatment Methods

To stop the spread of the BMSB Australia and New Zealand have taken measures to ensure cargo from certain countries (including Canada) are treated against the insect. Our treatment methods will ensure the perfect solution for your valuable freight. We are approved by the Australian Government and the Ministry for Primary Industries for the fumigation of goods entering Australia and New Zealand.
